

Loipart - Waste Management Systems

Alingsås, Sweden (December 13, 2016)

Loipart Group, a world-leading supplier for marine galley equipment, provision rooms and laundry systems, strengthen and expand its business with own designed systems and equipment for ship-generated garbage together with the new partner company **A5 Marine Technologies AB**.

The founders of A5 Marine Technologies AB have for many years been working with environmental development within the maritime and offshore sector with focus on ship-generated garbage and have as a forerunner earned a good reputation in the market when it comes to cost-effective, compliant solutions and environmental expertise.

Ship-generated garbage

Management of ship-generated garbage has become a complex area, both legally and technically. Various types of waste are generated during operation and in order to implement a waste management system, it is necessary to identify and quantify the different types of waste on board. Too often a compactor is installed on board without being used.

Activities related to the management of ship-generated garbage are broadly regulated internationally by MARPOL Annex V. The revised MARPOL Annex V entered into force on January 1st 2013 and sets the minimum standard for waste management. More specific requirements may exist in regional or national jurisdictions.

Systems and equipment

Our systems are developed in close co-operation with onboard crew members and manufactured in our own facilities in Eura, Finland. We can supply complete food waste systems (gravity or vacuum), chute systems, compactors, shredders and crushers.

With our technical expertise and experience we can assist clients worldwide with efficient and innovative solutions and also improve the environmental performance and strategies on board.
